

Absence Manager V10.01 – New Features

iCalendear integration

Absence Manager supports iCalendar integration for email / calendar systems such as Microsoft Outlook, if you have users who do not run the Lotus Notes client edit their user records and on the first tab change their mail system to "Other" from Lotus Notes - this will then send iCalendar calendar appointments for those users.

Report Module

You can now select a date range to include archived records from the previous year, thus allowing reports to be run on last years leave statistics

Multiple name match

If Absence Manager encounters a multiple name match during the workflow process this will be automatically resolved by looking up the smtp email address in the name and address book.

NOTE – Upgrade instructions can be found at the link below:
